## CONNECTIONS & OPERATION

***NOTE:*** Turn off any devices before connecting them to the Mobile Power Pack.

- To charge the Mobile Power Pack using your desktop or notebook computer, plug the retractable USB connector into an available USB port. The Charging LED on the front panel (closest to the bottom-right corner) will light red while the Mobile Power Pack is charging.
  ***NOTE:*** To utilize maximum battery capacity for powering your other devices, always fully charge your Mobile Power Pack. The 3 Power Level LEDs on the front panel indicate the charge level / remaining battery capacity of the Mobile Power Pack. All 3 LEDs lighted blue indicates maximum battery capacity and a full charge.
- Use the included power tip (DC-USB or DC-iPod/iPhone) to connect a device to the Mobile Power Pack via the DC Output Jack on the upper-side panel (as labeled in the image above).

---

***SAFETY PRECAUTIONS:***

- Do not expose the Mobile Power Pack to any moisture or excessive humidity.
- Don't use, place or leave the Mobile Power Pack in, on or near any heat sources, such as radiators, registers, stoves, lighted candles, electrical components that are known to generate significant amounts of heat, or even closed, unventilated vehicles (that is, don't leave the Mobile Power Pack — in use or not — in a parked car during hot weather).
